

## Barloan Plus

# A powerful enhancement to your loans service

Trimagic Barloan Plus simplifies and streamlines the loans and returns process. It provides a very simple interface so users can process their own loans if required.

Barloan Plus processes loans and returns quickly and effectively into your database via an ODBC connection. It is designed to allow “self-checkout” by end users on a 24x7 basis, freeing up information centre staff. Returns are done as a batch by simply scanning the items from the “returns box” and the system will be updated immediately.

Barloan Plus supports the use of general or portable barcode readers, ensuring a user-friendly system for end users. Portable barcode readers allow information centre staff to perform stocktakes or office “raids” to update the system with the actual location of items after scanning the items from various offices.

The Barloan Plus interfaces can be customised by the information centre staff, this allows manipulation of the information that is display when lending or returning items. Or even display a “message” at time of loan to advise the borrower of any upcoming news from the Information Centre.

Reservations, alerts and invalid scans are communicated immediately to ensure system integrity.

The system also comes with a barcode generating tools that enables the information centre to print their own customised barcodes using standard laser printer stationary.

### Barloan Plus Enterprise

Barloan Plus Enterprise is a web-enabled version of the Barloan Plus technology. If you would prefer your lending system to operate in a browser on your intranet, ask Trimagic for details on our Barloan Plus Enterprise version.

If you want automated loans notices to go to borrowers ask Trimagic about our Profiler system as well.

### What are the Benefits?

- Provides a very simple & user friendly loans interface
- May be used with just a barcode reader only. Protect your system by removing both the mouse and the keyboard.
- Multiple loans can be issued to one borrower in one easy action
- Multiple items may be returned by reading all their barcodes, then clicking the Process button.
- Improves your department’s efficiency by allowing your borrowers to process their own loans, saving time and money
- Ensures you know where all items are located, minimising the number of ‘lost’ items
- Alert messages give you control over the loans process and ensures accurate information & statistics in the database.
- Retains full information on current and past loans by automating the returns process. Barloan Plus deletes returned items from the current loans database so that your catalogue only shows what is currently on loan. It loads the returned item details into a loan history database automatically so that you have a full record of lending for statistical and budgeting needs.

- You decide whether the item, the borrower, or the default loan period takes priority. The default loan period can be varied on an individual item or borrower basis.
- Message alerts tell you whether the item is reserved, hasn't been returned properly, or isn't on the database.
- Feedback button allows instant communication with library staff.
